

AWS Cost Optimization Assessment - Access & Data Boundaries

How access should be scoped for a cost assessment.

Least necessary access

The preferred assessment model is read-only/least-privilege access to the AWS evidence needed for billing, utilization, architecture and configuration review. Write permissions are not required for an assessment-only engagement.

Sensitive information

Credentials should never be shared in documents, email or chat. Access should use customer-controlled AWS identity mechanisms and be removed when the agreed work is complete.

Implementation separation

Changes to infrastructure are a separate implementation activity and should be reviewed/approved before execution.

Document purpose: pre-engagement product transparency. This document does not represent an independent certification, legal opinion, penetration test, or guarantee of security/compliance outcomes.
