

AWS Cost Optimization Assessment - Methodology

A fixed-scope approach to finding avoidable AWS spend without generic savings promises.

Assessment flow

- Agree account/workload scope and read-only evidence access
- Establish cost baseline and major cost drivers
- Review compute, networking, storage, managed services and idle/non-production patterns
- Validate optimization opportunities against workload requirements
- Prioritize actions by expected impact, risk, effort and dependency

Evidence-based recommendations

Recommendations are based on the customer's actual environment and billing/usage evidence. Lumbe Tech does not promise a generic savings percentage before analysis.

Engineering basis

Lumbe Tech engineering work includes cost-aware EKS architecture, KEDA scale-to-zero patterns, serverless operations and analysis of EKS, EC2, ALB and NAT Gateway cost drivers.

Document purpose: pre-engagement product transparency. This document does not represent an independent certification, legal opinion, penetration test, or guarantee of security/compliance outcomes.
