

AWS Security & Cloud Posture Assessment - Methodology

A fixed-scope review of AWS configuration risk and missing controls.

Review areas

- IAM and permissions
- Public/network exposure
- Encryption and key usage
- Secrets handling
- Logging and auditability
- Backups and recovery controls
- Relevant AWS security services and findings

Evidence sources

Where applicable, evidence may include Security Hub, GuardDuty, IAM Access Analyzer, AWS Config, CloudTrail and configuration data. Findings are validated in context rather than copied blindly from scanners.

Prioritization

Findings are classified by severity, affected area, evidence and remediation priority. Formal compliance certification and penetration testing require their own explicit scope.

Document purpose: pre-engagement product transparency. This document does not represent an independent certification, legal opinion, penetration test, or guarantee of security/compliance outcomes.
